

How do I get involved?

What is the process and timeline?

The community **vision** is a series of statements encapsulating the common ground for the future that reflects the aspirations of residents. **Goals** describe broad public purposes to achieve the vision, toward which policies and programs are directed. They express the broad desired results of the Plan. **Strategies** are statements that outline the approach and/or the specific accomplishments required to implement a goal. Together the vision, goals and strategies will comprise the **comprehensive plan**. The **future land use plan** provides jurisdiction-wide land use classifications and mapping that tie the vision, goals, and strategies to the land. The future land use plan includes subarea plans for the unique geographies in the county.

Vision	Summer 2010
Comprehensive Plan	Summer/Fall2009
Future Land Use Plan Process	Fall 2010
General Plan Drafted for Review/Adoption	Winter 2011

There will be many different opportunities to get involved over the next several months:

- **Visioning Workshop:** One countywide Visioning Workshop will be held to discuss what we treasure, what our concerns are, what we want to change, and what we want to be like in 20 years. This workshop is the best opportunity to discuss the future of your community with your neighbors.
- **Vision Verification:** Share your opinion anonymously and view polling results instantaneously during an electronic keypad polling session open to the community.
- **Education Forums:** These sessions are intended to be educational and to help citizens better understand the issues facing and options available to the County. Consultant team members will present information to attendees and will sometimes facilitate a short discussion after the presentation.
- **Sub-area Future Land Use Workshops:** As part of the final step, developing a future land use plan, a series of workshops targeted at specific geographic areas will get people involved in developing the map that care and know the most about the areas.
